2012 OREGON WHOLESALER CLASS II SELF-INSPECTION REPORT

All Wholesale Distributors MUST complete the inspection report and have it available for inspection by ***September 1, 2012*** *pursuant to OAR 855-040-0040(1). DO NOT MAIL TO THE BOARD OFFICE.*

First Name: _____
Business Name: _____
License No: _____
Address: _____
City, State, Zip: _____

Tel: _____ Normal Business Hours: _____
DEA No: _____ Expiration Date: _____

1. Has the wholesale distribution been granted any exceptions by the Board or DEA in any laws or rules? If yes, please attach a copy. Please note that rule changes may invalidate an old waiver and waivers are valid for a maximum of 3 years. ☐Yes ☐No
2. Has any disciplinary action been taken against the wholesale distributor, its owner, principal or any other responsible individuals or entities associated with the wholesale distributor by the Board or the Board of any state or the federal government? If yes, please attach a statement explaining why. ☐Yes ☐No
3. Go to the last page. Write where your Self Inspection Report and Law Book are located, and hang this slip next to the distributor's registration on the wall or the safe.
4. Where are the following items located (make the audit - life as specific as possible, there can be many filing cabinets and "North" is hard to find without a compass.)
   - Current written Policies and Procedures: _____
   - Invoices for the last 3 years: _____
   - All required drug pedigrees: _____
   - Pedigree authentication records for the last 3 years (if applicable): _____
   - Self Inspection Reports for the last 3 years: _____
   - List of responsible individuals and their qualifications/roles: _____
5. How many employees does wholesaler employ? _____

DEVELOPER / CONTRACTOR SELF-INSPECTION FORM

INSPECTION LOG

The site shall be inspected before storm events with a 40% chance of 0.25 inches or greater of predicted precipitation, and after actual precipitation, and documented on the Construction Site Inspection Checklist Form. Incidents of noncompliance must be reported to the Field Engineer. A log of all inspections, as shown below, should be kept current and maintained at the job sites at all times.

Date	Inspector	TYPE OF INSPECTION			Observations - if post-storm - inspection, note size of storm in inches
		Routine	Pre-storm	Post-storm

REINSPECTION (Inspection to Confirm Previous Deficiencies Have Been Corrected)

☐ Reinspection (indicate type of inspection to be rechecked _____)

☐ $57.00 Reinspection fee submitted

Illinois pharmacy self inspection.

In psychology, a self-report is any test, measure, or survey that relies on an individual's own report of their symptoms, behaviors, beliefs, or attitudes. Self-report data is gathered typically from paper-and-pencil or electronic format, or sometimes through an interview. Self-reports are commonly used in psychological studies because they can yield much valuable and diagnostic information to a researcher or a clinician. One of the most commonly used self-report tools is the Minnesota Multiphasic Personality Inventory (MMPI) for personality testing. One of the primary advantages of self-report data is that it can be easy to obtain. It is also an important way that clinicians diagnose their patients—by asking questions. Those making the self-report are usually familiar with filling out questionnaires. For research, it is inexpensive and can reach many more test subjects than could be analyzed by observation or other methods. It can be performed relatively quickly, so a researcher can obtain results in days or weeks rather than observing a population over the course of a longer time frame. Self-reports can be made in private and can be anonymized to protect sensitive information and perhaps promote truthful responses. Collecting information through a self-report has limitations. People are often biased when they report on their own experiences. For example, many individuals are either consciously or unconsciously influenced by "social desirability." That is, they are more likely to report experiences that are considered to be socially acceptable or preferred. Self-reports are subject to these biases and limitations: Honesty: Subjects may make the more socially acceptable answer rather than being truthful.Introspective ability: The subjects may not be able to assess themselves accurately.Interpretation of questions: The wording of the questions may be confusing or have different meanings to different subjects.Rating scales: Rating something yes or no can be too restrictive, but numerical scales also can be inexact and subject to individual inclination to give an extreme or middle response to all questions.Response bias: Questions are subject to all of the biases of what the previous responses were, whether they relate to recent or significant experience and other factors.Sampling bias: The people who complete the questionnaire are the sort of people who will complete a questionnaire. Are they representative of the population you wish to study? Most experts in psychological research and diagnosis suggest that self-report data should not be used alone, as it tends to be biased. Research is best done when combining self-report data with other information, such as an individual’s behavior or physiological data. This “multi-modal” or “multi-method” assessment provides a more global, and therefore more likely accurate, picture of the subject. The questionnaires used in research should be checked to see if they produce consistent results over time. They also should be validated by another data method demonstrating that responses measure what they claim they measure. Questionnaires and responses should be easy to discriminate between controls and the test group. J Pers Assess. 2018;100(6):650-659. doi:10.1080/00223891.2017.1420660 A self-report inventory is a type of psychological test often used in personality assessment. This type of test is often presented in a paper-and-pencil format or may even be administered on a computer. A typical self-report inventory presents a number of questions or statements that may or may not describe certain qualities or characteristics of the test subject. Chances are good that you have taken a self-report inventory at some time in the past. Such questionnaires are often seen in doctors’ offices, in online personality tests, and in market research surveys. Even the fun quizzes you often see shared on Facebook are examples of self-report inventories. While this is an example of these inventories being used in an informal and entertaining way, such surveys can and do serve much more serious goals in collecting data and helping to identify potential problems. This type of survey can be used to look at your current behaviors, past behaviors and possible behaviors in hypothetical situations. There are many different self-report inventories. The following are just a few well-known examples. Perhaps the most famous self-report inventory is the Minnesota Multiphasic Personality Inventory (MMPI). This personality test was first published in the 1940s, later revised in the 1980s and is today known as the MMPI-2. The test contains more than 500 statements that assess a wide variety of topics including interpersonal relationships, abnormal behaviors, and psychological health as well as political, social, religious, and sexual attitudes. Another well-known example of a self-report inventory is the questionnaire developed by Raymond Cattell to assess individuals based on his trait theory of personality. This test is used to generate personality profile of the individual and is often used to evaluate employees and to help people select a career. California personality inventory is based on the MMPI, from which nearly half questions are drawn. The test is designed to measure such characteristic as self-control, empathy, and independence. Self-report inventories are often a good solution when researchers need to administer a large number of tests in relatively short space of time. Many self-report inventories can be completed very quickly, often in as little as 15 minutes. This type of questionnaire is an affordable option for researchers faced with tight budgets. Another strength is that the results of self-report inventories are generally much more reliable and valid than projective tests. Scoring of the tests a standardized and based on norms that have been previously established. However, self-report inventories do have their weaknesses. For example, while many tests implement strategies to prevent "faking good" or "faking bad" (essentially pretending to be better or worse that one really is), research has shown that people are able to exercise deception while taking self-report tests. Another weakness is that some tests are very long and tedious. For example, the MMPI takes approximately 3 hours to complete. In some cases, test respondents may simply lose interest and not answer questions accurately. Additionally, people are sometimes not the best judges of their own behavior. Some individuals may try to hide their own feelings, thoughts, and attitudes. Verywell Mind uses only high-quality sources, including peer-reviewed studies, to support the facts within our articles.
